Project Demo Planning

Field	Details
Date	26 October 2026
Team ID	N/A (Individual Project)
Project Name	Electric Vehicle Market Performance & Insights
Maximum Marks	1 Mark

Demo Objective

To present the Electric Vehicle Market Performance & Insights project, explaining EV market growth, regional performance, competition, battery technologies, pricing, charging infrastructure and future opportunities in a clear 5-minute presentation for stakeholders.

Demonstration Tools & Setup

Presentation Platform: OBS Studio
Display: Slide presentation (full screen)
Hardware / Resolution: HP Victus 15 (Intel Core i5, RTX 3050), capturing at 1080p.

Demo Agenda & Script Flow

Time	Section	Talking Points
0:00 - 0:25	Introduction	Greet the audience, introduce the topic (EV Market Performance & Insights) and outline what will be covered: growth, regions, competition, batteries, pricing, charging and future opportunities.
0:25 - 0:55	Market Scale	Global annual EV sales have crossed 20.7M units; EVs hold about 25% share of new passenger vehicles. Hatchbacks and two-wheelers drive urban adoption.
0:55 - 1:25	Regional Performance	China leads with 12.9M units (+17% YoY); Europe has 4.3M (+33%) driven by pollution control rules; North America has 1.8M (-4%) due to regulatory changes.
1:25 - 1:55	Competitive Dynamics	BYD (35% domestic share, strong production), Tesla (premium EVs, direct sales), legacy OEMs and new entrants competing and accelerating growth.
1:55 - 2:25	Global Manufacturing	Three production factors: localized Gigafactories, robotic automation and supply chain hubs. East Asia leads battery material processing.
2:25 - 3:00	Battery Innovation	NMC Lithium (58% share, high energy density), LFP (35% share, safer and lower cost), Sodium-Ion (abundant materials, suited to affordable city vehicles and storage).
3:00 - 3:35	Pricing Matrix	Premium (above $80K, 500+ km range), Mass Market ($30K-$50K, 350-450 km), Urban Micro Cars (below $20K, 150-250 km). Chart compares lifecycle emissions of EVs and petrol cars.

3:35 - 4:05	Ecosystem Support	Ultra-fast chargers (150 kW+) enable long-distance travel; Vehicle-to-Grid (V2G) uses stored battery energy for the grid; closed-loop recycling recovers materials.
4:05 - 4:35	Future Growth Roadmap	2026: Supply Parity as battery prices fall. 2028: solid-state batteries move toward commercialization. 2030: about 45M annual EV units, above 40% of global automotive sales.
4:35 - 5:00	Conclusion	EV industry growth is driven by battery innovation, affordable pricing, charging infrastructure and better manufacturing. Companies should focus on local supply chains and next-gen batteries. Thank the audience and open for questions.

Preparation Checklist

• Verify the presentation file opens correctly and all slides display properly.

• Test microphone audio and screen-sharing resolution.

• Practice the script to stay within the 5-minute target.

• Keep the Final Report and Business Questions documents open in a secondary tab for quick reference.
