| Team ID | N/A (Individual Project) |
| Project Name | Electric Vehicle Market Performance & Insights |
| Maximum Marks | 1 Mark |

## Future Expansion Phases

| Phase | Title | Description |
|---|---|---|
| Phase 1 | Current State (Tableau Public + CSV) | The current deployment uses static CSV/Excel extracts published to Tableau Public. It demonstrates the core visualizations, 3x3 dashboard, and KPI tracking for executive stakeholders. |
| Phase 2 | Live Database Integration | Transition from static CSV files to a live database connection (e.g., AWS RDS, PostgreSQL, or SQL Server). This allows the dashboard to update automatically as new global EV sales data is ingested. |
| Phase 3 | Dataset Expansion & Infrastructure | Expand the dataset to include external factors that impact EV sales, such as regional charging station availability, government EV incentives, and global lithium supply chain costs. |
| Phase 4 | Predictive Analytics & Forecasting | Integrate Tableau's predictive modeling or connect to Python/R scripts to forecast EV sales volume, battery chemistry adoption rates, and price-to-range trajectories based on historical trends. |
