Project Design Phase-I: Solution Architecture

Field	Details
Date	25 October 2026
Team ID	N/A (Individual Project)
Project Name	Electric Vehicle Market Performance & Insights
Maximum Marks	4 Marks

Solution architecture is a complex process, with many sub-processes, that bridges the gap between business problems and technology solutions. Its goals are to find the best tech solution to solve existing business problems, describe the structure, and define features and requirements.

Architecture Layers

Layer	Key Elements	Technology
1. Data Source (Raw Data)	Global EV sales, pricing, battery tech, regional growth	Published reports and figures
2. Content Preparation	Select key figures, group into topics, check accuracy	Notes and spreadsheet
3. Script & Slide Design	Slide content, timed speaking script, charts	Microsoft PowerPoint, Word
4. Presentation File	10 slides, consistent layout	PPTX / PDF export

5. Demo Recording	Full-screen slides, voice narration, 1080p capture	OBS Studio
6. End-User Interface	Audience and stakeholders; slide flow and summary	Presentation playback / video

Component Description

Data Source (Raw Data): Published global EV market figures covering sales volumes, pricing, battery technologies and regional growth.

Content Preparation: Selects the most important figures, groups them into topics, and checks them for accuracy.

Script & Slide Design: Builds the 10 slides and writes a speaking script timed to about 5 minutes.

Presentation File: The final slide deck, exported as PPTX or PDF for presenting or sharing.

Demo Recording: Records the presentation in full-screen with voice narration using OBS Studio.

End-User Interface: The audience views the slides and recording to understand the EV market and its outlook.
